## DESCRIPTION:

Opioids use disorder (OUD) is a chronic condition that affects millions of Americans. If left untreated it can result in serious consequences including increased morbidity, relapse, opioid overdose, and death. Medication-assisted treatment is effective for OUD and has been shown to decrease all-cause mortality and opioid overdose-related deaths. This pharmacist-driven training will provide detailed education on the induction and maintenance of medication-assisted treatment for opioid use disorder.

## OBJECTIVES:

- Describe the epidemiology of opioid overdose and opioid use disorder in the United States
- Examine the prescribing patterns of opioids for chronic non-cancer pain over the past two decades
- Differentiate the clinical presentation of opioid dependence, opioid withdrawal and opioid use disorder
- Classify the pharmacology and therapeutics for methadone, buprenorphine/naloxone, and naltrexone for the treatment of opioid use disorder
- Discuss treatment considerations for patients with HIV and Opioid Use Disorder

## PRESENTER:

**Dr. Jasmine Carpenter PharmD**, is a board-certified psychiatric pharmacist. She received her Doctor of Pharmacy from Howard University College of Pharmacy. Upon graduating from Howard University, she completed her Postgraduate Year-1 (PGY-1) Pharmacy Practice Residency at the Washington DC Veterans Affairs (VA) Medical Center. As a Mental Health Clinical Pharmacy Specialist, she provides clinical services and direct psychotropic management to patients receiving mental health and substance/alcohol use disorder services within primary care.
