

Evaluating the Efficacy and Effectiveness of Long Acting Injectables Versus Oral Antipsychotics in the Treatment of Schizophrenia

Date: 06/19/2020 Time: 1:30 – 2:30PM

Continuing Professional Education
Office of Continuing Professional Education
Howard University College of Pharmacy
2300 4th Street NW, Washington DC, 20059

Who should attend: This program is designed for all pharmacists.

Needs statement: Schizophrenia is a debilitating mental health disorder that leads to increased health care costs for patients whose disease state is not adequately controlled. Pharmacists and pharmacy students should be familiar with the agents used to treat schizophrenia including the long acting injectable formulations that promote increased adherence.

Statement of goal: To review and evaluate the use and effectiveness of oral antipsychotics compared to long acting injectable antipsychotics in the treatment of schizophrenia.

Program Type: Live Webinar

Activity Type: Knowledge-based

Objectives:

At the completion of this activity, the participant will be able to:

- Describe the clinical manifestations of schizophrenia according to the *Diagnostic and Statistical Manual of Mental Disorders 5th Edition (DSM5)*
- Explain the pharmacological treatment approach for schizophrenia and identify the differences in tolerability of typical and atypical antipsychotics
- Identify the clinical factors and patient preferences that influence the prescribing of different antipsychotic formulations
- Interpret the clinical trial outcomes of studies regarding the use of long acting injectables versus oral antipsychotics in schizophrenia therapy

Faculty Advisor:

Tamara McCants, PharmD, Howard University College of Pharmacy
2300 4th Street NW, Washington, DC 20059

Pharmacy Resident:

Jessica Pinchinat, PharmD, CareFirst BlueCross BlueShield Community Health Plan District of Columbia
1100 New Jersey Ave SE, Washington, DC 20003
