Needs statement: There have been July 2024 updates to the Society of Critical Care Medicine's stress ulcer prophylaxis guidelines for critically ill patients. The guideline outlines several risk factors, determines clinical benefits, reviews drug classes and identifies patients who may be candidates for stress ulcer prophylaxis. Recent evidence from the REVISE trial demonstrates the use of routine stress ulcer prophylaxis with proton pump inhibitors for critically ill patients.

Statement of goal: To engage pharmacists in the management of stress ulcer prophylaxis for critically ill patients

Objectives: At the end of the presentation, the participants should be able to:

- **Examine** the epidemiology and prevalence of stress ulcers along with the mechanisms underlying their formation in the ICU setting
- **Compare and contrast** different pharmacological and non-pharmacological agents used for stress ulcer prophylaxis
- **Analyze** key clinical trials and their influence on stress ulcer prophylaxis in critically ill patients
- **Explore** the implications of recent updates to the Society of Critical Care Medicine's guidelines on stress ulcer prophylaxis for clinical practice
